

S14 Fig. Deletion of *ECE1* results in lower oral fungal burden. Oral fungal burden of immunocompetent C57BL/6 mice infected with indicated strains of *C. albicans* after 2 days of infection. Results are median of a total of 5 mice per group from a single experiment. The y-axis is set at the limit of detection (20 CFU/g tissue). Data were analyzed using the Mann-Whitney test. *, $p < 0.05$.
